

Lenovo TruScale Backup as a Service with Veeam

Veeam Backup & Replication unifies backup and replication in a single solution, that can be connected with any source, including virtualized environments.

The Challenge

Lack of High Availability

- Legacy Shortcomings
- Disruptive Backups
- Increasing Expectations

Cyber Threats

- Slow Complex Recoveries
- High cost & time to recover
- Idle Data

Complexity

- Slow Time-to-Value
- Manual Processes
- Unplanned Downtime

Business Outcome

Rapid Comprehensive Recovery

- Verified backup
- Rapid, Flexible recoveries
- Reduced downtime

Maximize ROI

- Workload Consolidation
- Reliable Data Access
- Business Value

Simplified IT

- Easier Implementation
- Intelligence & Automation
- No Upfront cost

A Lenovo DE Series system provides simple and reliable SAN storage that integrates seamlessly with most application environments. Its modular design helps decrease operating expenses while offering many options for connectivity, capacity, and performance that easily scale to meet the demands of a growing backup environment.

Key Benefits:

1. Increase performance and flexibility with a modular, flexible design.
2. Reduce capital expenses and the cost of downtime and deployment.
3. Improve backup reliability with granular, self-service virtual machine (VM) and file recovery.
